EMERGENCY MEDICAL TECHNICIAN - BASIC – CTS-3080 – 1 Credit

Prerequisite Human Body Systems or Health Careers - This course prepares students to provide basic emergency medical care and transportation for critical and emergent patients who access the emergency medical system. Students interested in pursuing a career in health care will be able to get hands-on patient care practice during the Saturday morning skills labs held once a month and have the chance to witness a variety of people who work in emergency medicine during the required 10 hours of observation. During the intense didactic portion of the class, students will make connections between the biomedical science they have been learning and the practical application of patient care in the prehospital setting. Students will be required to complete the psychomotor skills test and computer-based test to earn their NREMT certification.
